Data Visualisation with Tableau

Instructions

Background Information

As a data analyst, you have been tasked to create a dashboard for retail store management that sells products around the world. The dashboard should inform the management of key metrics whenever they want to learn how the business is performing.

The project requirements include:

- Representing data in at least 3 different visualizations that communicate different insights.
- Formatting is done to all the dashboard components.
- Creation of a filter in the dashboard that allows users to filter for their desired outcomes. This filter needs to be applicable to all components.
- Availability of the dashboard online. Hence, the submission for this project will be a link to your published dashboard.

Dataset

- The dataset for this project can be found here [https://bit.ly/3IypAqq].
